

Tornado compressors

Built for the long run – The NEW Tornado compressors

You can find further information here.

Maintenance

1 x year

Change filters for the best compressed air quality

Every 10 years...

...the piston sleeve of the Tornado compressors must be replaced.

For the long run – durable and high-performance

The quality of the components and the details in the technical design ensure durability. The air circulation in the aggregates has been redesigned, optimizing thermal management.

Due to an optimized thermal management, the heat now dissipates even better and the load during continuous operation is reduced – benefiting longevity. Having the piston sleeve replaced every ten years will ensure the functionality and value retention of your Tornado for a long time to come.

Power Pack

Dürr Dental compressors are also certified as Class IIa medical devices in accordance with the MDR (EU 2017/745)

Durable and high performance – with the quality of the components and attention to detail in the technical design

Flexible configuration, ideal for dental practices with up to four users

Consistency counts: dry, hygienic, flavourless, and odourless air supply for continuous operation

Multi-stage filter system for hygienic compressed air with improved reliability

The filters installed in Dürr Dental compressors ensure that consistent performance is maintained and will help preserve the value of your compressed air system. Even in the best filters, germs, dirt and dust will build up over time. An annual filter change therefore ensures the best possible performance, while reducing wear and extending the service life of the entire compressed air system.

Run with safety – dental compressed air from Dürr Dental

Tornado 1 

Tornado 2 

Tornado 4 

Tornado 1 & 2 with noise reduction hood

The single-cylinder compressor with a 20-liter compressed air tank

Compressor with 2 cylinders and 20-liters of compressed air capacity

The twin compressor with 4 cylinders and a 50-liter compressed air tank

Available for the new Tornado 1 & 2
